Grow

Landcraft is now producing plants specifically for Green Roofs. We have a large selection of hardy sedum and other plants suitable for roof installations. These hardy drought tolerant plants are custom grown in a quick draining, light weight soil mix which meets green roof specifications. Our plants are available in custom designed trays of 15 that can be planted with one variety or mixed to your specifications. The well grown mature plants are easily removed and installed to meet any custom planting plan design.

Design

Landcraft has been working on roof gardens since 1982 and has vast resources to meet your Green Roof specifications. We can design your Green Roof to meet with specific design needs utilizing intensive and extensive methods. We specialize in unique Hybrid Roof Systems that incorporate traditional garden esthetics with environmental sustainability and both passive and recreational utilization of the outdoor space. Landcraft is distinct in that we grow, design, install, supervise and maintain Green Roofs.

Install

Landcraft has on-staff and works with qualified and certified Green Roof technicians that are able to install a variety of Green Roof systems.

Maintain

We are able to provide a complete Green Roof package: from concept and design to growing and supplying plant material, installation and then maintaining your Green Roof .
